– databases exploration on behalf of SQL
– implemented solutions analysis
– development of simple applications in Python
– development of Perl scripts dedicated to do database imports/exports and server downloads/uploads
– development of bash scripts scheduled in Linux CRON
– data migrations between CRM systems

Projects

Ciphering
Tech-stack: Python, GIT

About: Program developed with OOP approach. It allows to do cipher/decipher using ROT algorithms. It allows to export ciphered text into txt or json file

Shooting range flask app
Tech-stack: Python, Flask, Keycloak, Postgres, Celery, Docker, API, HTML, CSS, GIT

About: Application dedicated to manage shooting range competitions. Main aim was to improve my skill of multiple technologies integration and implementation in the frame fully operational web app based on microservices.

Shooting range django app
Tech-stack: Python, Django, HTML, CSS, GIT, JavaScript

About: My first application allowing to manage shooting range competitions. This app does not rely on multiple technology solutions as in case of flask version but from functional point of view is much more complex due to the fact that it works on production environment and new functionalities are continuously implemented.

Courses, trainings and certificates

● STANAG6001 language certificate at the level of 3333 – English language
● ALTKOM AKADEMIA – Enterprise Linux Administration I v.8
